# Sina Korhani Shirazi

Passionate software engineer with experience in full-stack development, blockchain, and AI-driven systems. Enjoys learning new technologies, solving challenging problems, and contributing to innovative projects.

Work Experience

Software Engineer, *Viora Startup – Berlin (Freelancer)*

Jul 2024 – PRESENT

Contributing to the development of Viora, a decentralized crowdfunding platform for musicians. Designed and implemented backend APIs using Strapi for managing campaign creation and related functionalities. Played a key role in transitioning the frontend framework from React Native to Next.js 15, ensuring seamless performance and scalability. Additionally, developed and deployed Solana smart contracts written in Rust using the Anchor framework, independently managing the entire implementation process to support blockchain-based functionality.

Software Engineer, Berlin — *Freelancer*

Nov 2022 - *July 2024*

Muzikie is a decentralized fundraiser platform for music. My job is to contribute to the design and development of the blockchain application as well as other APIs created in NodeJS and other relevant technologies.

Full-stack Developer, Tehran — *Freelancer*

February 2020 - March 2022

I worked as an external member with a Web Development Agency called Yara in Tehran. We worked on a series of websites, most of which required improvements such as refactoring legacy code. We needed to replace the PHP code base with PWA and REST API. I worked mostly on the frontend applications, for which we used React, Redux, ReactQuery and more. We had projects with JS and TypeScript.

Full-stack Developer, Shiraz — Freelancer

October 2019 - January 2022

I worked on an e-commerce website. The website belonged to a fashion retail company. The company hired a group of freelancer developers to create the website. We used the Scrum methodology to meet the deadlines and report to the in-house project manager.

Frontend developer, Shiraz — Freelancer

February 2019 - September 2019

I worked on a web based airline ticket reservation system. The goal of the project was to
